Javascript ES6, React, Material UI, NodeJS, Express, HTML, CSS, PHP, jQuery, MySQL, MongoDB, JWT, auth0, websocket, NPM, Apache, NGINX, GraphQL, RESTful API, Git, Notion, Figma, Sublime Text, Visual Studio Code, PuTTY SSH, Wordpress, Shopify, Liquid, Bootstrap, Amazon AWS, Windows and Linux DevOps, functional and object-oriented programming, AGILE, SCRUM, Googling.

PROJECTS

2022 – **realPOS** - POS software system built with React, nodejs, SQLite and Electron.js packager. It is all made with web technologies but runs natively on the system. It is a centralized system with UI/UX adapted for multiple restaurant staff users allowing for easy bills, clients and table management.

2022 – **MealPortal (Fullstack Web App)** – I developed and deployed React online pickup and delivery ordering software for restaurants. The software sends staff real time order notifications. The software recognizes returning customers with an email one-time passcode system that signs a JWT token on verification. It uses Google Maps API Address Autocomplete for 100% correct delivery addresses.

2021 – **AYCEHub (Fullstack Web App)** – tableside scan to order system for All You Can Eat restaurants. Staff assign and print QR codes to customers from the table management system. Orders are sent and printed out to the kitchen on a thermal printer from the cloud with a local machine running a NodeJS server that listens to the web app via socket.io websocket.

WORK EXPERIENCE

Full Stack Shopify Web Developer   Dupray Inc. , Montreal QC   2022-Present

- Implement design projects and internationalization with in-house designers.
- Develop the business logic over 9 international Shopify websites that are deployed over 3 continents.
- Implement in-house global product reviews system in order to centralise all reviews from all 9 shops into Oracle Netsuite ERP and redistribute them from Google Translate API. The reviews are localized for each shop, in order to show all collected reviews and drive 33% more sales.

Full Stack Web Software Developer   MSM Technologies, Montreal QC   2021-2022

- Prototype UI/UX design planning and workflow planning using Figma.
- Develop full stack web applications using React, Nodejs, and MySQL.
- Ensure customer demands are 100% satisfied through regular meetings.
- Perform DevOps provisioning and maintenance on Linux web servers on the cloud.

Assistant Director   Mitsuki DIX30, Brossard QC   2020-2021

- Mounted Raspberry Pi digital signage menu displays.
- Developed a full stack web application for online ordering and the static restaurant business website.

Freelance   2015-2020

- Create web applications and static websites for small to medium businesses. Clients include: Restaurant 2K Fusion, Warrior Cleaning, Passage Decor.

EDUCATION

AEC Linux and Windows Network Administration   Édouard Montpetit CÉGEP, Longueuil QC   2022-Present

Studies in Bachelor of Accountancy   Concordia University, Montreal QC   2016
